Saint Paul's Episcopal Church

Greenville, North Carolina

Completed 2000

This new church building is designed to seat 450 parishioners and will house a large, new, concert pipe organ which is also designed to be used in conjunction with the School of Music of the nearby university.

The building's design fits in with its residential surroundings and the smaller existing church, which is to become a chapel, and provides a dramatic view from downtown Greenville.

The exterior is matching brick, and the interior features slate floors in the Nave and Side Aisles and slate and marble in the Chancel. Exposed trusses and clerestory windows enhance the vertical feel of the interior.

Custom-built gothic furnishings in quarter-sawn white oak complete the Chancel. The font is a relocated historic piece with an enlarged basin in marble mosaic.
